

Director.

Museum Perth.

Dr. Sir. Since forwarding you
specimen which you ascribe as friction of
a native mill. I have discovered another
smaller stone of like shape evidently been
used for the same purpose. I have also a
square of diorite about 6" x 8" x 3" very
much worn on one side shall I send it along?
It may be thus used by natives or perhaps by
the Pioneer sandal-wood cutters. I don't want
to bother you with specimens of road metal
I saw a very highly polished stone owned by
a man near here. it has belonged to the
natives & I will get hold of it later on
hoping to hear from you

Yours etc.
Arthur Pumble.
