Perth

Dear Sir

I have yours of Aug 14th "expressing
thanks of the Trustees for the present of
a fragment of worked bone"

When I took this fragment to you I
simply asked for M^r Glauret that he
might give me his opinion "on the origin
of the bone & the reason of its present state
of apparent petrification." My reason
being that where I found this bone there
may be others buried and as there is no limestone
country for many miles around I cannot account
for it being petrified (apparently).

As M^r Glauret was not in you requested
me to leave the fragment and you would
submit it for an opinion & fort me the

piece together with the effort & opinion.
I do not value the bone, but when I ^{have} taken
the trouble to bring it 150 miles & take it
to you for an opinion I trust you will
do as you promised and let me have
advice as to what animal it most likely
belonged to.

Thanking you in anticipation
Yours Faithfully
C. F. Parker
